

## Dual Compound Fork seal kit for motorcycles

Our Dual Compound fork seal kits are a motorcycle industry first and available now for popular applications.

Code	Description	Dimensions
DUAL-43W	Dual Compound Seal Kit WP	43 mm
DUAL-48K	Dual Compound Seal Kit KYB	48 mm
DUAL-48W	Dual Compound Seal Kit WP	48 mm
DUAL-49S	Dual Compound Seal Kit SHOWA	49 mm

**€ 35,99** vat excluded

*The ultimate in sealing performance and durability.*

# Dual Compound

## Fork seal kit for motorcycles

Motorcycle fork seals are a vital protective part of the overall front suspension system, with a crucial impact on riding comfort and trouble-free operation in the harshest environments.

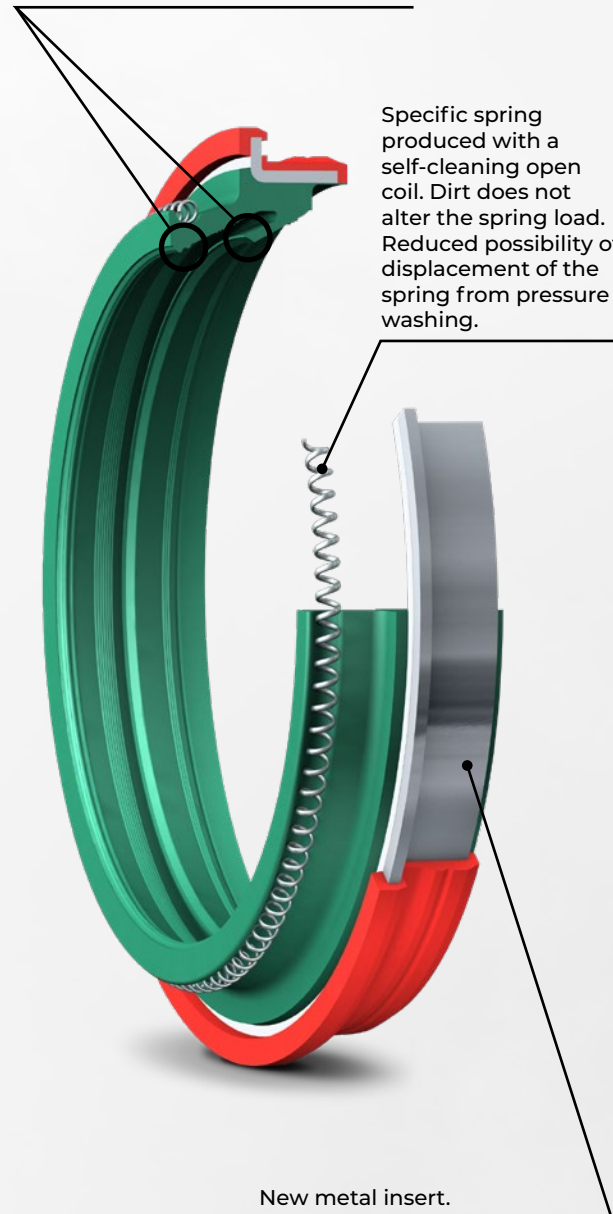

Completely redesigned featuring exciting new technology – adding to SKF's well established fork seal products introduced over 10 years ago – consists of two newly developed rubber compounds and new geometries for both the scraper lip and the sealing lip.

The molded combination of compounds, together with improved sealing lip properties, offers enhanced followability on the fork tube for reduced friction and increased service life. There is an all new metal insert and a self-cleaning open wound spring on the dirt scraper lip, effectively preventing contamination of the seal. Benefits of the dual compound fork seals are:

- Extended sealing capability
- Improved contamination exclusion
- Reliable protection of the interior fork mechanism
- Minimum friction for enhanced vehicle control and performance

New design of the scraping lip, combined with a new compound.

New design of the dust lip combined with a new specific green compound, for better grip and reduced friction.
